

Vercel Migration Checklist

Pre-Migration Status

What Stays 100% Intact

- **Authentication System:** Prisma + bcrypt + RBAC (no changes)
- **Stripe Integration:** All checkout routes + webhooks preserved
- **Quotes & Leads:** `/api/quotes` , `/api/leads` endpoints untouched
- **Client Portal:** Login, dashboard, project tracking
- **Admin Portal:** Full admin interface + middleware
- **Database:** PostgreSQL connection via `DATABASE_URL`
- **API Routes:** All 50+ API endpoints remain functional
- **Phone/SMS:** OpenPhone webhooks continue to work

What's Already Configured

-  Node version constraint: `>=18 <=20`
 -  Vercel CLI installed: `v48.8.0`
 -  Prisma postinstall: `prisma generate || true`
 -  Build command: `yarn build`
 -  Minimal `vercel.json`: `{"framework": "nextjs"}`
 -  Production build: **PASSED** (all routes valid)
-

Deployment Verification

Test on Vercel Preview URL

Once deployed, you'll receive a URL like:

```
https://your-project-abc123.vercel.app
```

Test these routes immediately:

Homepage & Marketing Pages

- ☐ `/` - Homepage loads
- ☐ `/about` - About page
- ☐ `/services` - Services page
- ☐ `/pricing` - Pricing page
- ☐ `/portfolio` - Portfolio page

Lead Capture Critical Path

- ☐ `/get-started` - Main lead form
- ☐ `/quote` - Quote request form
- ☐ `/request-quote` - Alternative quote form

- [] /thank-you - Confirmation page
- [] Submit a test lead and verify it saves to database

Client Portal

- [] /portal/login - Client login page
- [] /portal/dashboard - Client dashboard (after login)

Admin Portal

- [] /admin/login - Admin login page loads
- [] /admin/dashboard - Admin dashboard (after login)
- [] /admin/leads - View leads
- [] /admin/analytics - Analytics page
- [] /admin/pipeline - Sales pipeline

API Routes (Use Postman or curl)

```
# Test lead submission
curl -X POST https://your-project.vercel.app/api/leads \
  -H "Content-Type: application/json" \
  -d '{"email": "test@example.com", "phone": "5551234567"}'

# Test quote endpoint
curl -X POST https://your-project.vercel.app/api/quotes \
  -H "Content-Type: application/json" \
  -d '{"name": "Test User", "email": "test@example.com"}'

# Test auth endpoint
curl https://your-project.vercel.app/api/auth/signin
```

Stripe Integration

- [] Start a test checkout (use Stripe test mode)
- [] Verify redirect to Stripe hosted checkout
- [] Complete test purchase with test card: 4242 4242 4242 4242
- [] Verify webhook receives payment confirmation
- [] Check that purchase appears in admin dashboard

Phone/SMS Integration (OpenPhone)

- [] Send test SMS to your OpenPhone number
- [] Verify webhook reaches Vercel: Check /api/sms-webhook
- [] Verify auto-reply is sent back
- [] Check /admin/chats shows the conversation

Vercel Project Settings

Build & Development Settings

Go to: **Vercel Dashboard** → **Your Project** → **Settings** → **General**

```

Framework Preset:      Next.js
Root Directory:        (leave blank OR point to nextjs_space if monorepo)
Build Command:         (leave blank - auto-detected)
Output Directory:      (leave blank - Next.js default: .next)
Install Command:       yarn install --frozen-lockfile
Development Command:   (leave blank)
Node Version:          18.x or 20.x

```

Environment Variables

Go to: **Vercel Dashboard → Your Project → Settings → Environment Variables**

Required Variables (copy from your current `.env`):

```

# Database
DATABASE_URL=postgresql://user:pass@host:5432/dbname

# NextAuth
NEXTAUTH_URL=https://www.kreativeaiagency.com
NEXTAUTH_SECRET=your-secret-here

# Stripe
STRIPE_PUBLIC_KEY=pk_test_...
STRIPE_SECRET_KEY=sk_test_...
STRIPE_WEBHOOK_SECRET=whsec_...

# Email (Resend)
RESEND_API_KEY=re_...

# Phone (OpenPhone)
OPENPHONE_API_KEY=your-key-here
OPENPHONE_PHONE_ID=your-phone-id

# AI (OpenAI)
OPENAI_API_KEY=sk-...

# Optional: Studio OS (add later when ready)
# STUDIO_API_URL=https://your-studio-api.com

```

IMPORTANT:

- Set environment variables for **all environments**: Production, Preview, Development
- After adding env vars, **redploy** for changes to take effect

DNS Configuration Checklist

In Vercel (Step 1)

- [] Go to Project → Settings → Domains
- [] Add domain: `kreativeaiagency.com` (set as PRIMARY)
- [] Add domain: `www.kreativeaiagency.com` (auto-redirect)
- [] (Later) Add: `admin.kreativeaiagency.com`

In GoDaddy (Step 2)

- [] Delete old A record for `@` (if pointing to 52.34.76.202)

- [] Add A record: @ → 76.76.21.21
- [] Add/Update CNAME: www → cname.vercel-dns.com
- [] (Later) Add CNAME: admin → cname.vercel-dns.com

Verification (Step 3)

- [] Wait 15-30 minutes for DNS propagation
- [] Check <https://dnschecker.org/?domain=kreativeaiagency.com>
- [] Verify Vercel shows “Valid Configuration” for both domains
- [] Test: <https://kreativeaiagency.com> (should load)
- [] Test: <https://www.kreativeaiagency.com> (should redirect to non-www)

Post-Migration Testing

Smoke Tests (Quick 5-minute check)

1. [] Visit homepage - loads correctly
2. [] Submit a quote form - saves to database
3. [] Login to admin - dashboard works
4. [] Check admin leads - new lead appears
5. [] Test Stripe checkout - completes successfully

Integration Tests (Deeper validation)

1. [] **Lead Flow:** Submit form → Receive email → Appears in admin
2. [] **Payment Flow:** Start checkout → Pay with Stripe → Webhook fires → Purchase recorded
3. [] **Auth Flow:** Login → Protected routes work → Logout
4. [] **SMS Flow:** Send SMS → Webhook received → Auto-reply sent → Logged in admin
5. [] **Phone Flow:** Call OpenPhone → Quo.ai answers → Call logged

Performance Tests

- [] Run Lighthouse audit: <https://pagespeed.web.dev/>
- [] Check Vercel Analytics: Project → Analytics
- [] Monitor response times: Project → Logs → Functions

Rollback Plan (If Issues Occur)

Option 1: Instant DNS Rollback

If critical issues appear after DNS switch:

1. Go to GoDaddy DNS Manager
2. Change A record @ back to: 52.34.76.202 (Abacus IP)
3. Wait 10-15 minutes for DNS to propagate back
4. Traffic returns to Abacus hosting

Option 2: Keep Both Running (Recommended for first 24-48h)

- Vercel deployment: <https://your-project.vercel.app>
- Abacus deployment: <https://kreativeaiagency.com> (via old DNS)

- Test Vercel thoroughly before switching DNS
- Once confident, flip DNS to Vercel

Studio OS Integration (Phase 2)

When Your AWS Studio API is Ready

Studio OS is your custom AI backend. When live:

1. Add Environment Variable:

```
bash
```

```
STUDIO_API_URL=https://your-studio-api.amazonaws.com
```

2. Gradual Migration Strategy (A/B test forms):

```
```javascript
// Phase 1: Test with 10% of traffic
if (Math.random() < 0.1) {
 await fetch('/api/studio/proxy', { method: 'POST', body: leadData });
} else {
 await fetch('/api/leads', { method: 'POST', body: leadData });
}
```

```
// Phase 2: Increase to 50% after 1 week of testing
```

```
// Phase 3: 100% to Studio OS after confirmed stable
```

```
```
```

1. Monitor Studio OS Performance:

- Response times
- Error rates
- Lead capture success rate

Success Metrics

Day 1 (Deployment Day)

- [] Site is live on Vercel
- [] All pages load correctly
- [] Forms submit successfully
- [] No console errors
- [] Stripe test checkout works

Week 1

- [] Real customer quote submissions work
- [] Payments process correctly
- [] SMS/phone webhooks stable
- [] Admin portal fully functional
- [] No reported customer issues

Week 2+

- [] Performance metrics stable or improved
- [] No increase in error rates
- [] Customer satisfaction maintained
- [] Ready to retire Abacus fallback

Common Issues & Solutions

Issue: Build fails with Prisma error

Solution:

```
yarn prisma generate  
yarn build
```

Issue: Environment variables not working

Solution:

1. Check Vercel → Settings → Environment Variables
2. Ensure variables are set for “Production” environment
3. Redeploy after adding variables

Issue: API routes return 404

Solution:

1. Verify `vercel.json` has `{"framework": "nextjs"}`
2. Check Build Output Directory is blank (default)
3. Ensure API routes are in `app/api/` or `pages/api/`

Issue: Database connection fails

Solution:

1. Verify `DATABASE_URL` in Vercel environment variables
2. Check if your database allows connections from Vercel IPs
3. Test connection string manually

Issue: Stripe webhooks not firing

Solution:

1. Update webhook URL in Stripe Dashboard to Vercel domain
2. Verify `STRIPE_WEBHOOK_SECRET` matches Stripe Dashboard
3. Check Vercel Function logs for webhook errors

Issue: OpenPhone webhooks not received

Solution:

1. Update webhook URL in OpenPhone dashboard
 2. Change from `52.34.76.202` to `kreativeaiagency.com`
 3. Test with a sample SMS
-

Timeline

Pre-Deployment (Complete)

- [x] Configure `package.json` with engines and scripts
- [x] Create minimal `vercel.json`
- [x] Run local production build
- [x] Verify all routes compile

Deployment (Next Step)

- [] Authenticate Vercel CLI (need token)
- [] Deploy to Vercel: `vercel --prod --confirm`
- [] Capture deployment URL
- [] Test all routes on preview URL

DNS Switch (After Testing)

- [] Add domains in Vercel
- [] Update GoDaddy DNS records
- [] Wait for DNS propagation (15-30 min)
- [] Verify SSL certificate auto-issued

Monitoring (Ongoing)

- [] Monitor Vercel Analytics
- [] Check Function Logs daily
- [] Review error rates
- [] Collect customer feedback

Contacts & Resources

Vercel

- Dashboard: <https://vercel.com/dashboard>
- Docs: <https://vercel.com/docs>
- Support: <https://vercel.com/support>

Domain (GoDaddy)

- DNS Manager: <https://dcc.godaddy.com/manage/kreativeaiagency.com/dns>

Monitoring

- Vercel Analytics: Project → Analytics
- Function Logs: Project → Logs
- DNS Checker: <https://dnschecker.org>

Final Notes

- **No Code Changes Needed:** Everything is ready in the codebase

- **Zero Downtime:** DNS switch is seamless once Vercel is verified
- **Rollback Available:** Can revert DNS to Abacus instantly if needed
- **Support Ready:** Vercel support is responsive for production issues

Status:  Ready to deploy once Vercel token is provided
